SHORTENED STATUTORY PERIOD OF RESPONSE	MAIL DATE	DELIVERY MODE
3 MONTHS	02/23/2007	PAPER

**Please find below and/or attached an Office communication concerning this application or proceeding.**

If NO period for reply is specified above, the maximum statutory period will apply and will expire 6 MONTHS from the mailing date of this communication.

# Office Action Summary

Application No.

10/721,616

Applicant(s)

SUGIURA ET AL.

Examiner

Ben Lewis

Art Unit

1745

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☒ This action is FINAL. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 1-6 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-6 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 24 November 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

## Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some \* c) ☐ None of:
- 1) ☒ Certified copies of the priority documents have been received.
  - 2) ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
  - 3) ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/08)  
Paper No(s)/Mail Date 8/18/06.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_.

**Detailed Action**

1. The Applicant's amendment filed on November 22<sup>nd</sup>, 2006 was received. Claim 1 was amended.

2. The text of those sections of Title 35, U.S.C. code not included in this action can be found in the prior Office Action (issued on August 24<sup>th</sup>, 2006).

***Claim Rejections - 35 USC § 102***

3. Claims 1-6 are rejected under 35 U.S.C. 102(e) as being anticipated by Ogami et al. (U.S. Pub. No. 2003/0064266 A1).

With respect to claims 1 and 4, Ogami et al disclose a polymer electrolyte fuel cell stack and method for operating the same and gas vent valve wherein fuel cell stack comprises membrane electrode assemblies (3) in which gas diffusion electrodes (2a, 2b) are arranged on both sides of an ion exchange membrane (1) and a reactant gas supply separators (5) interposed between the membrane electrode assemblies (3). The reactant gas supply separators (5) each has a first surface having first reactant gas supply grooves (9a) for supplying first reactant gas, a second surface having second reactant gas supply grooves (9b) for supplying an second reactant gas, and water supply means for supplying water to the first reactant gas supply grooves (9a) (See abstract). Ogami et al also teach that the present invention is related to a polymer electrolyte fuel cell stack, and more specifically to a fuel cell stack structure for uniformly

Art Unit: 1745

distributing mixed fluid of fuel gas and water "coolant" to each fuel cell unit in a polymer electrolyte fuel cell stack utilizing latent heat cooling with supply of water to reactant gas (Paragraph 003). FIG. 13 shows the gas vent hole **24** and its vicinity in the reactant gas supply separator **5**, seen from the oxidant gas supply surface. The gas vent hole **24** is connected to the buffer section **17**. As shown in FIG. 14, the fastening end plate **21** of the fuel cell stack **10** formed with the reactant gas supply separators **5** described above is equipped with and connected to a gas vent pipe **25**. A valve **26** is connected to the gas vent pipe **25** for selectively venting and blocking the gas vent holes **24** (Paragraph 0127). In the sixth embodiment described above, the valve **26** may be operated to open to communicate the gas vent holes **24** to the atmosphere when the water is supplied during the start-up operation of the fuel cell stack **10**, so that gas remained in the buffer sections **17** may be vented. Typically, water supply is stopped when the power generation by the fuel cell stack **10** is stopped. At that time, bubbles in the water passages to the communication holes **16** may be removed, because the water held below the communication holes **16** is remained there and the water supply manifold **14** is positioned below the buffer sections **17** (Paragraph 0128). On the other hand, the water held above the communication holes **16** is drained through the communication holes **16** to the fuel gas supply grooves **9a**. In the sixth embodiment, the gas bubbles which may be present above the communication holes **16** can be fully vented in a short time by venting the residual gas in the buffer sections **17** through the gas vent holes **24** "air releasing passage" (Paragraph 0129). (See Fig. 13).

**FIG. 13**

With respect to claims 2 and 3, Ogami et al teach that bubbles in the water passages to the communication holes 16 may be removed, because the water held below the communication holes 16 is remained there and the water supply manifold 14 is positioned below the buffer sections 17 (Paragraph 0128). On the other hand, the water held above the communication holes 16 is drained through the communication holes 16 to the fuel gas supply grooves 9a. In the sixth embodiment, the gas bubbles which may be present above the communication holes 16 can be fully vented in a short time by venting the residual gas in the buffer sections 17 through the gas vent holes 24 "air releasing passage" (Paragraph 0129).

With respect to claims 5 and 6, Ogami et al disclose a polymer electrolyte fuel cell stack and method for operating the same and gas vent valve wherein fuel cell stack comprises membrane electrode assemblies (3) in which gas diffusion electrodes (2a,2b) are arranged on both sides of an ion exchange membrane (1) and a reactant gas supply separators (5) interposed between the membrane electrode assemblies (3). The reactant gas supply separators (5) each has a first surface having first reactant gas supply grooves (9a) for supplying first reactant gas, a second surface having second reactant gas supply grooves (9b) for supplying an second reactant gas, and water supply means for supplying water to the first reactant gas supply grooves (9a) (See abstract). (See Fig. 5). Now, the fuel gas supply surface of the reactant gas supply separator 5 is explained referring to FIG. 5. The fuel gas supply grooves 9a are formed for fuel gas flowing there through in the central part of the reactant gas supply separator 5. FIG. 5 shows the opposite side of the reactant gas supply separator 5 shown in FIG. 3. Therefore, the locations of the manifolds 11a and 11b for fuel gas, the manifolds 12a and 12b for oxidant gas and the water supply manifold 14 in the marginal portions are in the opposite side in left and right sides when FIGS. 3 and 5 are compared (Paragraph 0091) (See Fig. 5).

### ***Response to Arguments***

4. Applicant's arguments filed on November 22<sup>nd</sup>, 2006 have been fully considered but they are not persuasive.

*Applicant's principal arguments are*

*(a) The Ogami reference also does not disclose an air-releasing passage that connects to the coolant flow field and a coolant discharge passage provided at a vertically middle position of the other horizontal end of the separator, as recited in claim 1,*

*(b) Applicants respectfully submit that the Ogami reference does not disclose the limitation of a coolant flow field formed along a surface of said separator extends in a portion of said surface that corresponds to a power generation surface of said electrolyte electrode assembly, as recited in amended claim 1.*

*(c) The Ogami reference also does not teach an air-releasing passage that connects to the coolant flow field for releasing air from the coolant flow field, the air releasing passage is formed at an upper position of an end of the separator such that at least part of the air-releasing passage is positioned above the top of the coolant flow field, as recited in claim 1.*

In response to Applicant's arguments, please consider the following comments.

(a), (b) and (c) Ogami et al teach that the present invention is related to a polymer electrolyte fuel cell stack, and more specifically to a fuel cell stack structure for uniformly distributing mixed fluid of fuel gas and water "coolant" to each fuel cell unit in a polymer electrolyte fuel cell stack utilizing latent heat cooling with supply of water to reactant gas (Paragraph 003).

In the sixth embodiment described above, the valve 26 may be operated to open to communicate the gas vent holes 24 to the atmosphere when the water is supplied during the start-up operation of the fuel cell stack 10, so that gas remained in the buffer

Art Unit: 1745

sections 17 may be vented. Typically, water supply is stopped when the power generation by the fuel cell stack 10 is stopped. At that time, bubbles in the water passages to the communication holes 16 may be removed, because the water held below the communication holes 16 is remained there and the water supply manifold 14 is positioned below the buffer sections 17 (Paragraph 0128). On the other hand, the water held above the communication holes 16 is drained through the communication holes 16 to the fuel gas supply grooves 9a. In the sixth embodiment, the gas bubbles which may be present above the communication holes 16 can be fully vented in a short time by venting the residual gas in the buffer sections 17 through the gas vent holes 24 "air releasing passage" (Paragraph 0129) (See Fig. 13).

**FIG. 13**

**Conclusion**

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ben Lewis whose telephone number is 571-272-6481. The examiner can normally be reached on 8:30am - 5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patrick Ryan can be reached on 571-272-1292. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
